2. OBJECTIVE

The objective of *Spider Web* is simple: protect your web and survive as long as possible. You can move around your web in any direction to avoid getting hit by the two bugs flying sporadically around your web and the human's swatter which is both trying to help and hurt you. Using your stunning powers, you can fire at the bugs to stop them in their tracks and leave theme vulnerable. Once you've stunned a pesky bug, you can eat it and increase your strength. Be careful, though, because your stunning ability won't last forever!

As you continue to stun and eat bugs, your environment will change and the bugs and human will become more irritated, moving faster and swinging their swatter harder and more often. Try your best to manage the bugs and avoid the swatter to make it all the way to the end!
